

RESOLUTION # 115-2022

Resolution offered by the Supervisors of the Public Works Committee.

Resolved by the Board of Supervisors of Oneida County, Wisconsin:

WHEREAS, the Town of Stella has filed an emergency petition for county aid for the cost of installing a culvert under Section 82.08 over Jennie Weber Creek on Cross Country Road, and

WHEREAS, the total cost of the labor, materials, and equipment was \$42,250.64 and the County share under Section 82.08 would be 50% of the \$42,250.64 or \$21,125.32.

NOW, THEREFORE, BE IT RESOLVED, that \$21,125.32 be paid to the Town of Stella, and the money to come from the County Bridge Aid Account.

Vote Required: Majority = 2/3 Majority = _____ 3/4 Majority = _____

The County Board has the legal authority to adopt: Yes No _____ as reviewed by the Corporation Counsel, _____, Date: 10-24-22

Approved by the Public Works Committee this 20th day of October, 2022.

Subject: Jennie Webber Creek @ Cross County Rd
Attachments: Wetland_impacts_form.pdf

Hi Eli –

Thanks for giving me a call back to discuss replacement of the failing crossing on Jennie Webber Creek @ Cross County Rd (~0.5 miles N of Roosevelt Rd).

The existing crossing consists of a 6' CMP and a 4' CMP. The 4' pipe is severely corroded and failing. Rust staining on the pipes indicate that the pipes have been running nearly full (insufficient capacity).

The following bullet points serve to summarize our conversation:

- Discussed replacement with either **one large arch pipe** (103"x71" or larger) or **two 6R=7; diameter pipes**. Either of these two options are acceptable as long as the replacement structure/s maintain good stream alignment. **or the alternative of replacement with two 6' pipes**, flow could be diverted to the existing 6' pipe until the north culvert is installed, and then flow could be diverted to the new culvert, while the second pipe is installed in roughly the same location as old pipe.
- The slopes at the crossing are nearly vertical. I mentioned lengthening the culverts to allow for more stable slopes, however, after giving this some additional thought, headwalls might be more feasible due to the road height? - otherwise excessive fill into the waterway & wetland would be needed in order to create a stable 2:1 slope; the road would need to be widened by approximately 32'-36' (based on estimated road height of 8'-9').

You can find the Municipal General Permit Instructions and Checklist [here](#). You can also use the attached supplementary form wetland to help document the extent of waterway/ wetland impacts.

Let me know if you have any questions or would like to discuss the project further before you submit.

Thank you,

Wendy Henniges
